

## Installation of the Bluetooth board in the ATS25 series

**Important! The creator of this document assumes no liability for the correctness of the installation and schematics shown. You are responsible for your own actions and if the device is damaged.**

Pictorial structure of the Schematic by DC9DD.  
Created by Manuel Lausmann

**NOTE:-** If a relay other than the one indicated is used, therefore with different switching between the contacts, it is necessary to redesign the connections to the relay itself by checking the component used.

Activate the Bluetooth interface in the software 4.16 of the ATS25

In the setting.ini file you have to make the following changes. Remove the two // at BTenable and audioMutePin. Then set the audioMutePin value to 0. Then upload the setting.ini to the ATS25 with the A Explorer.

```
// ----- variable pins -----
//SDAPin      , 21      // I2C bus SDA pin on ESP32
//SCLPin      , 22      // I2C bus SCL pin on ESP32
//resetPin    , 12      // reset pin ESP32
//encoderPinA  , 17      // encoder rotate pin A ESP32
//encoderPinB  , 16      // encoder rotate pin B ESP32
//encoderSwitchPin , 33    // encoder switch pin ESP32
//batteryInfoPin , 35    // battery voltage divider pin ESP32
//batteryChargePin , 36    // battery charge divider pin ESP32
//beeperPin    , 13      // beeper pin ESP32
//displayLedPin , 14      // display led control pin ESP32
//audioMutePin , 0        // hardware audio mute pin ESP32
//decoderPin   , 39      // decoder CW & RTTY pin ESP32
//audioInputPin , 32      // input audio pin ESP32
//LNAenable    , 26      // LNA enable pin ESP32
//antHiZ       , 25      // switching antenna input impedance pin ESP32
//lockSwitch   , 13      // functional button pin ESP32
//BTenable     , 27      // bluetooth enable pin ESP32
//BTpair       , 25      // bluetooth pair pin ESP32
```
